### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 9-10 are rejected under 35 U.S.C. 102(b) as being anticipated by Sinclair et al (US Pat. 5,533,665).

Regarding claims 9-10, Sinclair et al disclose a molded electronic component designed to comply with preset operating characteristics comprising a substrate 10 for holding passive circuit elements 12, 14 and a material molded 20 about the substrate and circuit elements, wherein the interaction of the material and the circuit elements causes the component to perform at the preset operating characteristics wherein the material forms a housing that is marked with indicia to indicate an operating characteristic associated with the component.

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States

Art Unit: 2835

only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims 9-10 are rejected under 35 U.S.C. 102(e) as being anticipated by Okumura (US Pat. 6,781,208).

Regarding claims 9-10, Okumura discloses a molded electronic component designed to comply with preset operating characteristics comprising a substrate 2 for holding passive circuit elements and a material molded 3 about the substrate and circuit elements, wherein the interaction of the material and the circuit elements causes the component to perform at the preset operating characteristics wherein the material forms a housing that is marked with indicia to indicate an operating characteristic associated with the component.

### ***Claim Rejections - 35 USC § 103***

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 11-14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Sinclair et al (US Pat. 5,533,665) in view of Nishijima (US Pat. 6,150,905).

Regarding claims 11-14 Sinclair et al disclose all the subject matter of the claimed invention except for means for interfacing with a piece of equipment selected

Art Unit: 2835

from the group consisting of telecommunications equipment, consumer electronics equipment, and computer equipment. However Nishijima discloses a dielectric filter. Therefore, it would be obvious to one of ordinary skill to modify means for interfacing with a piece of equipment selected of Nishijima into Sinclair et al's housing in order to provide a fine adjustment of electromagnetic coupling between the equipment.

Regarding claim 14, the structure as mentioned above can performed the method claim.

### ***Allowable Subject Matter***

5. Claims 1-8 are allowed.

The following is a statement of reasons for the indication of allowable subject matter: the prior art fails to show that a first circuit comprising at least one resistor, at least one inductor, and at least one capacitor; a housing comprising a material that is formed about the first circuit to encapsulate the circuit so that the combination of the circuit and material forms a second circuit having predetermined operating characteristics.

### ***Conclusion***

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Art Unit: 2835

Strizhevskiy (US Pat. 6,381,284) teaches method of and devices for telecommunications.

Okumura (US Pat. 6,781,208) teaches functional device of driver circuit.
